THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. **PROSECUTION ON THE MERITS IS CLOSED.** THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN **THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE** OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. **THIS STATUTORY PERIOD CANNOT BE EXTENDED.** SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

DETAILED ACTION

Response to Amendment

1. The Examiner acknowledges the amended claims filed on July 23, 2008. **Claims 1, 9, 10, 13, 16, and 25** have been amended. **Claims 3, 7, 8, 12, 18, 23, 24, 27, 32, and 33** have been canceled.

Allowable Subject Matter

2. **Claims 1, 2, 4-6, 9-11, 13-17, 19-22, 25, 26, and 28-31 (Renumbered as 1-23)** are allowed.
3. The following is a statement of reasons for the indication of allowable subject matter:

Regarding claim 1, the main reason for indication of allowable subject matter is because the prior art fails to teach or reasonably suggest, including all the elements of the present claim, the steps of time division multiplexing at said television camera a video signal and first control signals at a multiplexing period which is one-seventh ($1/7$) of a clock signal, by using a first time-division multiplexing circuit, to generate a first serial signal; transmitting to said video apparatus said first serial signal in a form of first differential signals by using a predetermined first pair of signal lines in said cable; transmitting said clock signal from said television camera to said video apparatus in a form of second differential signals by using a predetermined second pair of signal lines in said cable; separating at a first time division de-multiplexing circuit of said video

apparatus said first serial signal reproduced from said first differential signals from said first pair of signal lines into said video signal and said first control signals by using said clock signal reproduced from said second differential signals from said second pair of signal lines; and transmitting to said television camera second control signals in a form of third differential signals using a third pair of signal lines in said cable.

Regarding claim 9 (Renumbered as 6), the main reason for indication of allowable subject matter is because the prior art fails to teach or reasonably suggest, including all the elements of the present claim, that said first connection circuit includes: a first time-division multiplexing circuit for time division multiplexing an image signal from said television camera and first control signals at a multiplexing period which is one seventh ($1/7$) of a clock signal to convert said image signal and first control signals; a first differential signal circuit for producing first differential signals of said first serial signal and a second differential signal circuit for producing second differential signals of said clock signal, wherein said second connection circuit includes: a first differential signal receiver circuit for reproducing said first serial signal from said first differential signals, a second differential signal receiver circuit for reproducing said clock signal from said second differential signals, a first time division de-multiplexing circuit for time division de-multiplexing said time division multiplexed first serial signal reproduced from said first differential signals by said first differential signal receiver circuit, into said image signal and said first control signals based on said clock signal reproduced from said second differential signals by said second differential signal receiver circuit, and a third differential signal circuit for producing third differential signals from a second

control signal, wherein said transmission cable has a first pair of signal lines transmitting said first differential signals produced from said first serial signal, a second pair of signal lines for transmitting said second differential signals produced from said clock signal, and a third pair of signal lines for transmitting said third differential signals produced from said a second control signal from said video apparatus to said television camera.

Regarding claim 16 (Renumbered as 12), the main reason for indication of allowable subject matter is because the prior art fails to teach or reasonably suggest, including all the elements of the present claim, that said time-division multiplexing circuit time division multiplexes said video signal and said first control signal at a multiplexing period which is one seventh ($1/7$) of a clock signal to convert said video signal and first control signal into a serial signal, wherein said interface includes: a first differential signal circuit for producing first differential signals of said serial signal, and a second differential signal circuit for producing second differential signals of said clock signal, wherein said interface receives a second control signal, and transmits said first differential signals produced from said serial signal and said second differential signals produced from said clock signal to said video apparatus which time division de-multiplexes said serial signal reproduced from said first differential signals into said first control signal and said video signal based on said clock signal reproduced from said second differential signals.

Regarding claim 25 (Renumbered as 18), the main reason for indication of allowable subject matter is because the prior art fails to teach or reasonably suggest, including all the elements of the present claim, that time-division multiplexing circuit time

division multiplexes said video signal and said first control signal at a multiplexing period which is one seventh ($1/7$) of a clock signal to convert said video signal and first control signal into said serial signal, producing first differential signals of said serial signal by use of a first differential signal circuit; producing second differential signals of said clock signal by use of a second differential signal circuit; receiving a second control signal; and transmitting said first differential signals produced from said serial signal and said second differential signals produced from said clock signal to said video apparatus which time division de-multiplexes said serial signal reproduced from said first differential signals into said first control signal and said video signal based on said clock signal reproduced from said second differential signals.
